

Data Structures Assignment 4

- 1- Implement BST (Insert, DFS, Search, Delete, GetMaximum, GetMinimum)
Data is emp class that has ID, Name, Age, and BST work, depending on the employee ID
- 2- Think about how we can make sure the Tree is balanced every time we make an insert, delete to keep complexity $O(\log(N))$ for the operations (you will explain & illustrate logic and code) you could search, but try to think for 30 min first, as you will share your first thoughts and how it was similar or different 😊
